Common features

Strict temperature management

Digital display

The FX-888D's and FX-889's digital display makes it easy to check the set temperature at a glance.

Password function

Settings can be locked using a password to prevent them from being changed unexpectedly.

Preset mode

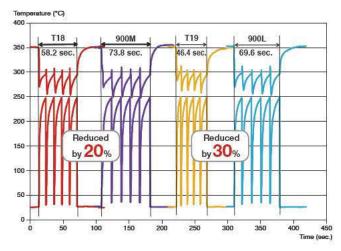

Simply select the desired temperature from a selection of preset temperatures registered in advance. (Up to 5 preset temperatures can be registered.)

Adjustment mode

With adjustment mode, what used to be a troublesome procedure is now as simple as entering the measured tip temperature in FX-888D and FX-889.

FX-888D and FX-889 deliver excellent thermal recovery by using T18 and T19 series tips for their terrific heat conductivity.

Test criteria

Measurement method	Thermocouples are mounted on the tip and the soldered portion on the board, and the time until the soldered portion reaches 250°C is measured for 5 points.

All-Round Soldering Station and Accessories

Features of FX-889

User-Friendly Design

Space-saving design

The reduced foot print is smaller than 2 of FX-888D and its iron holder.

Efficient setup is available even on smaller workbench.

Power-saving design

Independent switches cut the power for each iron when not in use.

Power-saving design minimizes standby electricity.

Superior operability

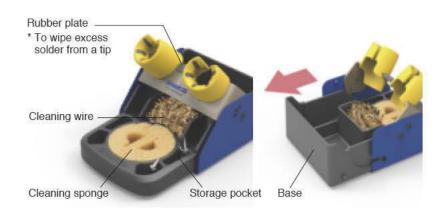

Four buttons were symmetrically placed at the both sides on the front panel. The two buttons on each side allow simple and intuitive operation.

A color band can be attached to the handle, and this makes it possible to see at a glance which side it is connected to. (2 pieces of color band are included as the standard accessories.)

· Rich functions of iron holder

- · Convenient pockets to stock soldering tips
- Three different ways for tip cleaning with provided cleaning tools
- Simple and easy cleaning of iron holder inside by removing holder base

Tip not included

- · Provides the heat to the tip effectively by an 'Induction heater'
- · Unique "Power assist" feature that assists the thermal recovery performance of the soldering iron tip
- · No calibration is required
- · Wide variety of tips available
- · Meets or exceeds IPC J-STD-001 and ANSI ESD S20.20.

Good Design Award has been a sole comprehensive design evaluation and commendation system in Japan since 1957. "G Mark", the symbol of the award has been recognized widely as a mark representing good design.

Features

IH technology delivers the ultimate soldering iron Excellent heat supply. Ideal for the most challenging soldering jobs.

FX-100 features IH (induction heater) that continuously powers the soldering iron and maintains the set temperature by automatically detecting even minute drops in temperature, plus HAKKO's proprietary "Power Assist" function.

FX-100 achieves powerful thermal recovery even with fine-shaped tips.

It provides excellent thermal responsiveness that conventional IH and sensor feedback systems cannot offer.

Boost function

To increase tip temperature by 5 to 10°C (depends on tip shape) for better working efficiency.

Interactive method by LCD display with 3 buttons PROFILE

Station ID, user name and solder type can be registered.

TIP LOAD

The soldering count is displayed.

TIP TIME

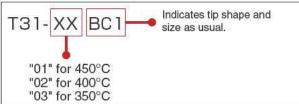

The cumulative running time on the iron tip is displayed.

TIP TYPE and NORMAL MODE/BOOST MODE

Measurement method	Thermocouples are mounted on the tip and the soldered portion on the board, and the time until the soldered portion reaches 250°C is measured for 5 points.
Board	Bakelite board
Component used	Terminal
Tip shape	Shape-1.6D
Temperature setting	340°C
Solder	Lead-free solder (Sn/Ag/Cu), diameter: 0.5 mm

Temperature preset mode

The temperature preset mode allows you to input three frequently-used temperatures in advance and recall them with one push of a button.

Tip Polisher

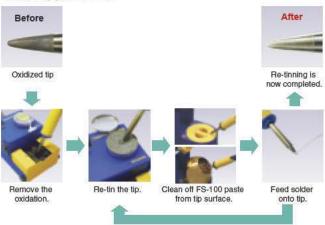

- Soldering tip polisher best suited to the removal of oxidation on soldering tips
- Prevents the shortening of the service life of tips caused by oxidation.

Usage

Cleaning procedure

Repeat the process twice or more.

^{*} Approximately 350°C is the most suitable temperature for cleaning the tips.

Use the brush to remove tough oxide.

V-Groove Maker

- · Cutting a V-groove put on the solder surface reduces the splash of solder and flux.
- · The solder feed amount can be controlled by turning the switch on and off.
- · Compact, space-saving automatic solder feeder

Features

Minimize solder and flux splash

Cutting a V-groove on the solder surface enables the release of gas pressure generated by the flux, thereby suppressing splash. HAKKO 375 can cut a groove in only the solder needed, then helps to reduce the level of defectiveness.

- · The vacuum pick-up function with an indicator ensures safety for the components and PWB's.

Hot-Air SMD Rework Station Digital

- · Possible to make full-scale thermal profiles with 6-zone hot air and a bottom heater
- · Possible to measure and record temperature of components and PWB with type K thermocouple
- · The dedicated software to link a station and a computer for easy and quick settings
- · Easy data transfer through an USB cable

Common Features of FR-810B and FR-811

New user friendly functions for SMD rework

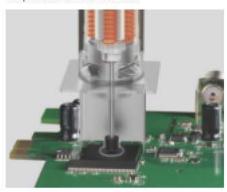

Pickup indicator

The indication comes up and the moment of picking up will be visible.

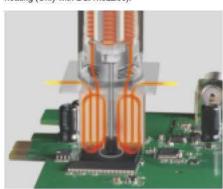

Vacuum pickup function

This can avoid an error to peel off the land by removing components with excessive force.

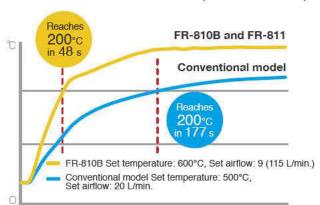

New type of nozzles

The new nozzles improve work efficiency with uniform heating (Only with BGA nozzles).

Efficiency improvement

The high volume airflow and high output of FR-810B and FR-811 make it possible to perform the same work in only one-third of the time required when using a conventional model. This reduces the thermal impact on boards and components.

^{*} Examination of time taken for connector sections soldered onto a ceramic board to be heated to 200°C with maximum temperature and airflow settings selected. Single nozzles with an approximately 4 mm diameter were used.

Common Features of FR-810B and FR-811

Auto sleep and auto shutoff features

To ensure safety and conserve power, when the handpiece is placed in the handpiece holder, the auto sleep function is activated and it starts cooling automatically.

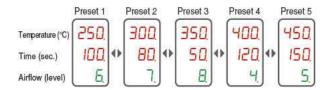

If the handpiece has not been removed from the handpiece holder (Example: using it in a rework fixture) and after it has been idle for 30 minutes, auto shutoff function is activated. It is automatically powered off.

Access to settings can be restricted via the password function for easy management.

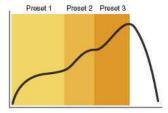

Handpiece holder No. B5048 in the picture can be attached to FR-811 as well (option).

Preset mode

Chain presets function for making a simple thermal profile

The chain presets function is to make a simple thermal profile by combining several preset conditions (up to 5 steps).

	Temperature (°C)	Time (s)	Airflow
Preset 1	250	100	6
Preset 2	300	40	6
Preset 3	350	50	6
Preset 4	100	000	6
Preset 5	100	000	6

*Presets 4 and 5 have been set to "000", so they are skipped.

Features of FR-811

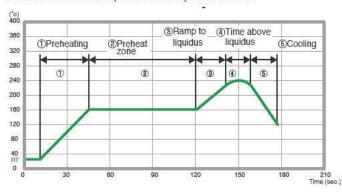

Interface designed for intuitive operation. Possible to link to a PC.

The functions needed for SMD rework are in a compact body.

Possible to make full-scale thermal profiles with 6-zone hot air and a bottom heater

A basic thermal profile is composed of the 5 parts shown below. FR-811 can provide 6 zones in which temperature, time, and air flow are controlled. Therefore FR-811 can make a full-scale thermal profile which is close to reflow profiles made by a reflow oven.

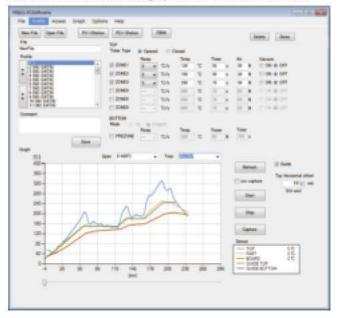

Record thermal data

By connecting a thermocouple included with FR-811, the temperature of the component or circuit board can be measured and recorded. In addition, if "TC LINK" is set, the heater output can be automatically controlled so that the temperature of the thermocouple attached to the component or circuit board follows the set profile.

Operation on a PC for various settings

By connecting FR-811 and a computer with a USB cable and using the dedicated software which comes as standard, a set thermal profile and actual temperature change can be shown in a graph in real time. The set values and graph can be saved in csv format.

Linked operation with the bottom heater

FR-811 can control on/off timing and output of the bottom heater which is available optionally.

Common Features of FR-810B and FR-811

Assembly of a low-cost SMD rework system

A low cost rework system can be assembled with a bottom heater, a grip fixture, and a board holder.

* The following pictures are set-up examples.

Option

Grip Fixture L

A board holder can be easily attached to the large baseplate.

Grip Fixture M

Recommended if a bottom heater is not required or in case of use of a bottom heater other than the dedicated model for FR-811.

The dedicated bottom heater for FR-811

Equipped with carbon heaters. Heating area is divided into 2 sections.

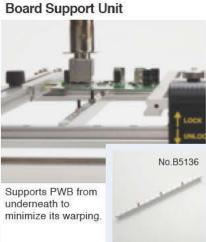

Board Holder

Makes it easy to set and remove a PWB and to make fine adjustments after setting.

Movement of smoke is affected by the surrounding environment

If the duct is mounted at an angle above the workpiece, it is affected by air conditioning.

If the duct is mounted directly above, it can be difficult to see the workpiece.

Duct is mounted on the worktable to provide excellent suction performance.

Freestanding ducts

Perfect placement provides suction where you need it.

Static Eliminator

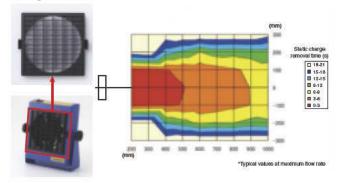

Features

Static elimination area

Wide-angle louver

Straight louver

Error output signal

Superb ease of maintenance

The discharge electrode can be replaced simply by turning it gently in the clockwise direction.

RoHS

- · Static eliminator enables the selection of the area in which static will be neutralized.
- · Locking mechanism maintains the angle of the eliminator unit.
- · Error output signal function is useful when incorporating the unit into line applications.

Without battery and barcode reader
Traceability management function can only be used for soldering irons.

Features

An Innovation in Tip Temperature Control

Flow chart of management

- Scan the unit and the measurer's ID by a barcode reader.
- 2. Measure the temperature.
- 3. Press the REC button to save the data on the unit main body.
- 4. Transfer and save the data on the PC.

Free of errors in temperature measurement by standardization of temperature measurement

The unit has a function to notify the end of measurement. When measurement is finished, "H" icon stops blinking. The unit can find measurement errors and prompt an operator to repeat measurement. The display shows "Fail" if tip loses appropriate contact with sensor before completion of measurement.

Pass/Fail judgment on measured temperature

Pass/Fail judgment on measured temperature can be automatically made if an acceptable temperature range is registered in advance. (The display shows "OK" or "Fail".)

Make it easy to manage tip temperature records by transferring the data to computer

Soldering Iron Thermometer

- Tip thermometer that provides reliable temperature control of soldering iron tips
- Compact design minimizes your workspace and enables you to easily carry it around.
- Incorporating an extremely fine sensor that has high temperature reactivity.

HAKOFG-101

Soldering Iron Tester

- Tip temperature, leak voltage, and tip-toground resistance can be easily measured with high accuracy.
- Soldering iron tester useful for daily maintenance of station-type soldering irons

What is leak voltage and tip-to-ground resistance?

Leak voltage

Leak current is the current that leaks from the tip to a board or device. Leak voltage is a specific measurement of the level of this current. The leakage can adversely affect delicate

devices, so it is necessary to check leak voltage on a daily basis.

Tip-to-ground resistance

Most leak current flows from the tip via the ground wire to the outlet ground terminal, and is prevented from affecting the device. Because of this, tip-to-ground resistance is another important issue that must be checked daily.

Common Features of FG-100 and FG-101

Dimensional measurement

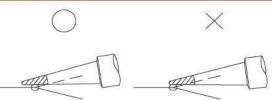

MAX HOLD function

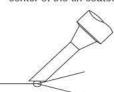

When the "MAX HOLD" button is pressed, "MAX HOLD" is displayed and the highest tip temperature is held on the display.

Procedure for Measuring the Soldering Tip Temperature

. Typical measuring point for Shape B, I and D (Measure at the center of the tin coated area)

· Typical measuring point for Shape BC and C which are tinned flat only.

Glue Gun

- Glue gun with temperature control function is applicable also to the adhesion of electronic components.
- Useful when fixing up sealing of carton boxes, dressing cases, and packages
- Only used with a stick-type adhesive that is easy to replenish (ø11.5 mm)

Applications

When using polyamide adhesives

- ·Reinforce and insulate soldered parts.
- ·Fasten capacitors, resistors, etc.
- · Fasten jumper wires.
- ·Perform insulation potting for terminals.
- · Fasten the ends of coils.
- · Fasten deflecting yokes and variable coils.

When using EVA adhesives

- ·Glue paper products (cardboard boxes, gift boxes, etc.).
- · Fasten wood products.
- · Fasten plastics and metals.
- · Fasten textiles and shock absorbent packing.
- ·Reseal products during packaging.
