

Tone generator LSI for cellular phones

BU8766FV

● Description

The BU8766FV is a tone generator IC for producing a triple chord that has both a RAM and sequencer to reduce the load of CPU soft. Cellular phones can give a musical performance by down-loading melody data from the C-MIDI format. This IC corresponds to three master clocks and has an adjustment function for a parameter needed to generate a chord. Waveform parameter can be selected from sine wave and special square wave.

● Dimension (Units : mm)

SSOP-B16

● Features

- 1) Triple chord can be generated by control from CPU.
- 2) CPU soft load can be decreased by incorporating RAM and sequencer.
- 3) RAM 1kByte as a buffer for download data.
- 4) Can adjust parameter needed to generate a chord.
- 5) DTMF generating function
- 6) Can select a wave parameter for generating sound.
(sine wave/special square wave)
- 7) Control from CPU by serial data

● Applications

Cellular phones with a function to register melody at receiving the call
